UNIVERSITY OF WOLVERHAMPTON

Project Management 5.1

Project Planning

UNIVERSITY OF WOLVERHAMPTON

Learning Outcomes

- By the end of this week, you will be able to:
  - Use Planning Tools
  - Discuss different breakdown models
  - Give relevant examples

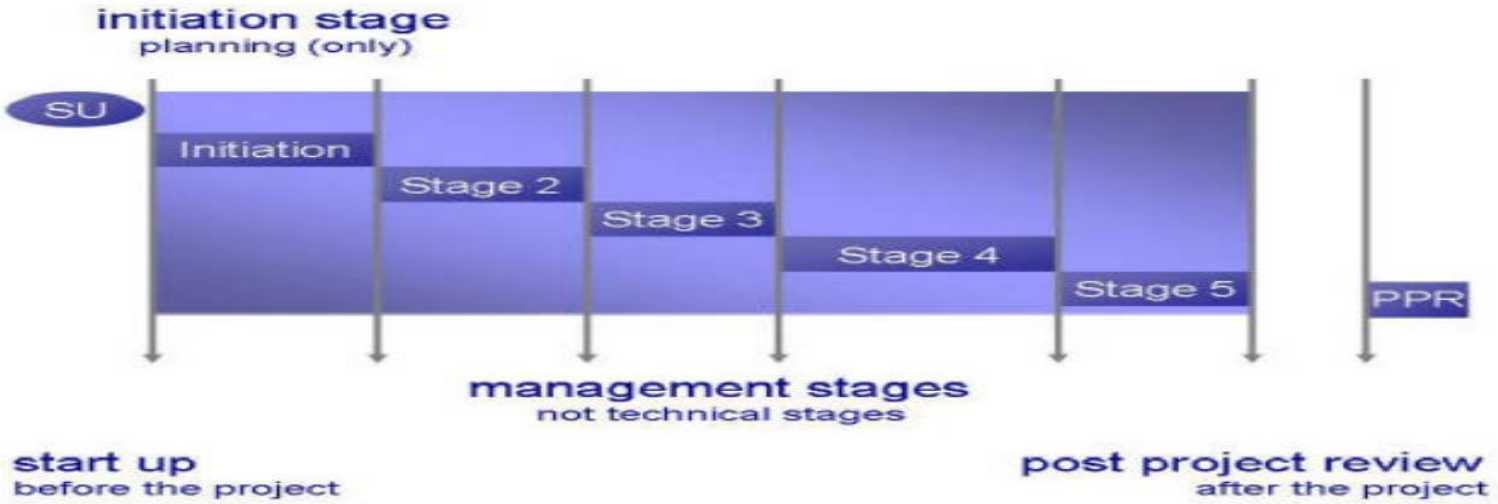

UNIVERSITY OF WOLVERHAMPTON

Planning and Stages

- Use terminology carefully.
- Different methodologies
- Involvement and responsibilities.

Stage 1	Stage 2	Stage 3	Stage 4	Stage 5
Identification of the need	Analysis of the Options and Approval	Project Implementation	Evaluation	Future Plans
Clear benefits identified	Feasible solution (s) identified Option chosen Resources committed Project manager Independent reviewer identified Risk matrix	Project plan Milestone reports Team brief	End of project report Measure success against objectives	Areas for improvement and forward planning

UNIVERSITY OF WOLVERHAMPTON

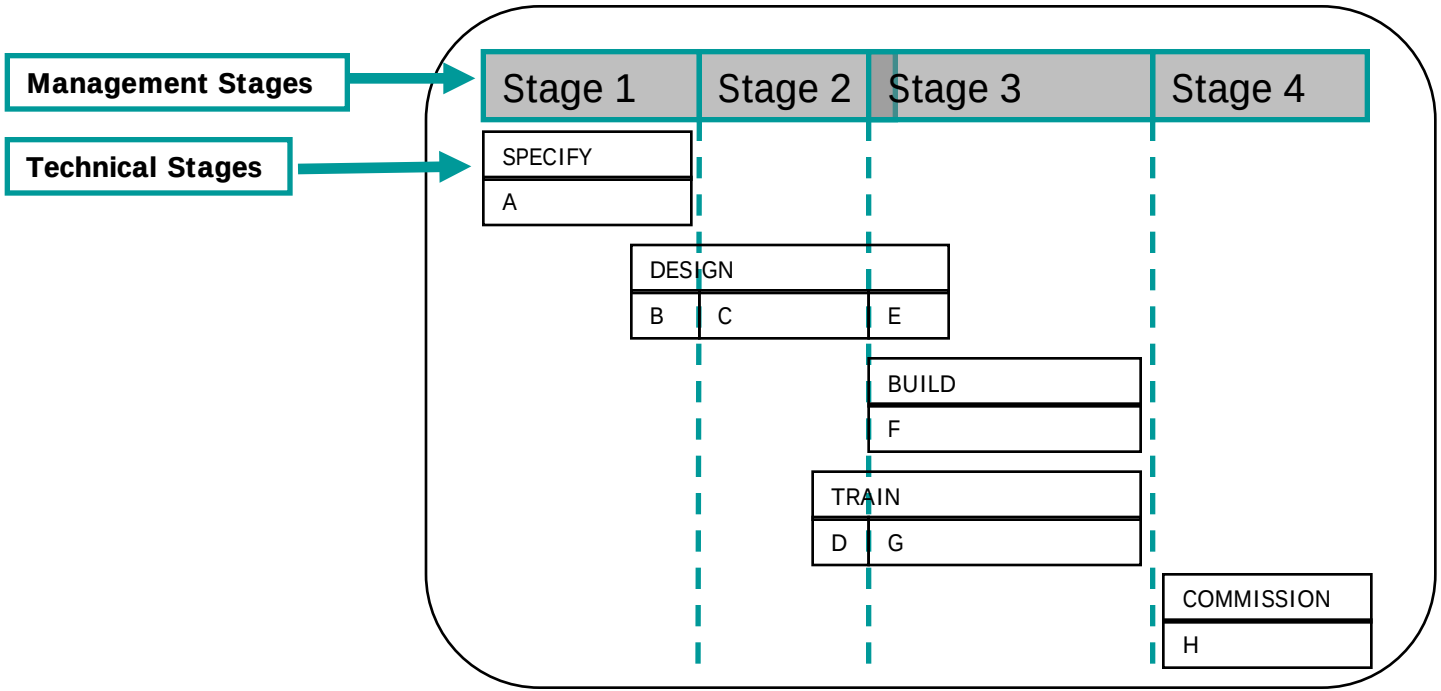

Different Methodologies

Stages may be expressed differently in different methodologies

- PRINCE2
- SCRUM
- DSDM
- Agile.

Management and Technical Stages

PRINCE2 Project Management for Business, CCTA, Her Majesty's Stationary Office (1997), ISBN 0-11-330685-7, (p53)

UNIVERSITY OF WOLVERHAMPTON

Project Control

- The key is control
- Not “controlled” environment
- Stages.

UNIVERSITY OF WOLVERHAMPTON

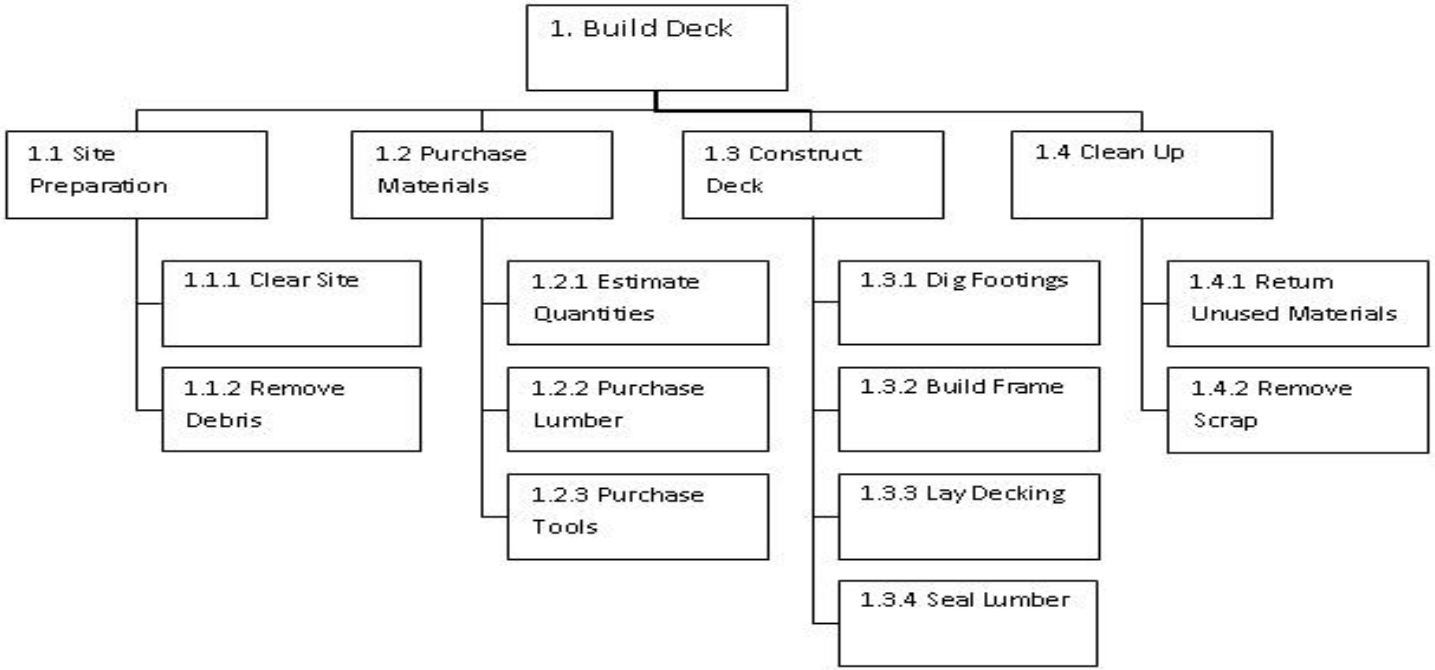

Planning Stages

- A great deal of effort can be wasted on attempts to plan beyond a sensible planning horizon
- PRINCE2
- Other methodologies overcome this by doing detailed planning at the point of imminent project delivery.

UNIVERSITY OF WOLVERHAMPTON

Product Breakdown Structure

- When a team is creating a product breakdown structure, there is likely to be discussion on the way in which to break down the products.

UNIVERSITY OF WOLVERHAMPTON

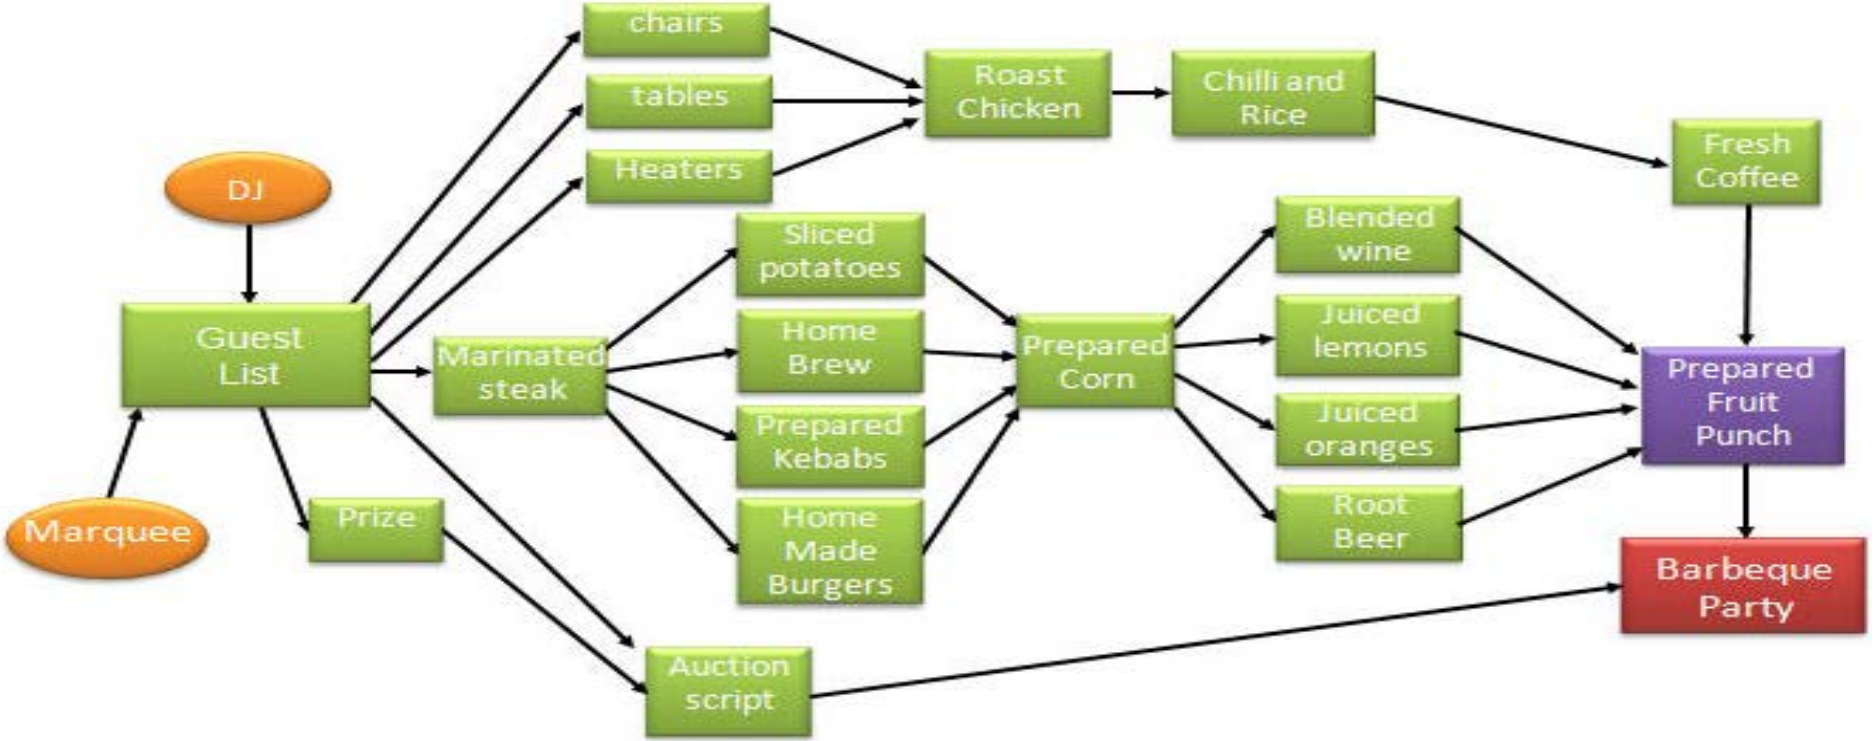

Project Flow Diagram

- A product flow diagram can be created to identify and define the sequence in which the products of the plan will be developed and any dependencies between them (PRINCE2).
- When creating a product flow diagram, consider the following:
  - It is sensible to involve key stakeholders
  - Some planners prefer to create the product flow diagram in parallel with the product breakdown structure.

- In SCRUM Methodology, the key products are held in a Product Backlog
- In DSDM this is held in a Timebox Plan
- In all cases, key stakeholders need to be involved.
