UNIVERSITY OF WOLVERHAMPTON

Project Management 7.4

Project Implementation – The Deployment and Closeout

UNIVERSITY OF WOLVERHAMPTON

Learning Outcomes

- By the end of this week, you will be able to:
  - Know the actions and themes needed to deploy
  - Deploy projects to plan
  - Give relevant examples

UNIVERSITY OF WOLVERHAMPTON

What is Deployment?

- All the actions necessary to make the new or changed capability ready to use
  - E.g. Not just constructing a new building:
    - Connecting it to vital services such as power, drainage, communications etc
    - Furnishing it for its intended use including signage
    - Moving people in
    - Ensuring everyone knows how to use the facilities
  - It’s only a capability once we have it to use and we know how to use it.

UNIVERSITY OF WOLVERHAMPTON

Deployment

- How we deploy will depend on the project
- But there are common themes
  - Controlled deployment
  - Managed via the project governance approach agreed with the project board
  - Stakeholders kept involved
- Our goal, beyond the successful deployment of our project, should be helping the organisation create a repeatable formula for future projects
  - Standardised documentation and processes
  - Lessons learned.

UNIVERSITY OF WOLVERHAMPTON

Deployment Summary

- Deployment is more than just ‘doing’
- The quality of deployment is what will decide how successful we are in realising benefits
- We must have a clear idea what we are deploying… so change control and reference to the business case are key
- Focus on benefits rather than capabilities.
